SUMMARY

I am a recent Marine Science graduate with a deep passion for technology and web development. While my academic background lies in marine science, I have actively pursued web development through self-learning and practical projects, building a strong foundation in both frontend and backend technologies. My experience in scientific research has honed my critical thinking, problem-solving abilities, and attention to detail—skills that are directly transferable to software development.

Now focused on a career shift into tech, I am proficient in HTML, CSS, JavaScript, and Node.js, and I am eager to expand my knowledge in full-stack development. I am seeking a Full-Stack Web Developer Internship to apply my technical skills and further grow in a collaborative and innovative environment.
